**7 Ways the Biden Administration Can Reverse Climate Rollbacks<sup>1</sup>**

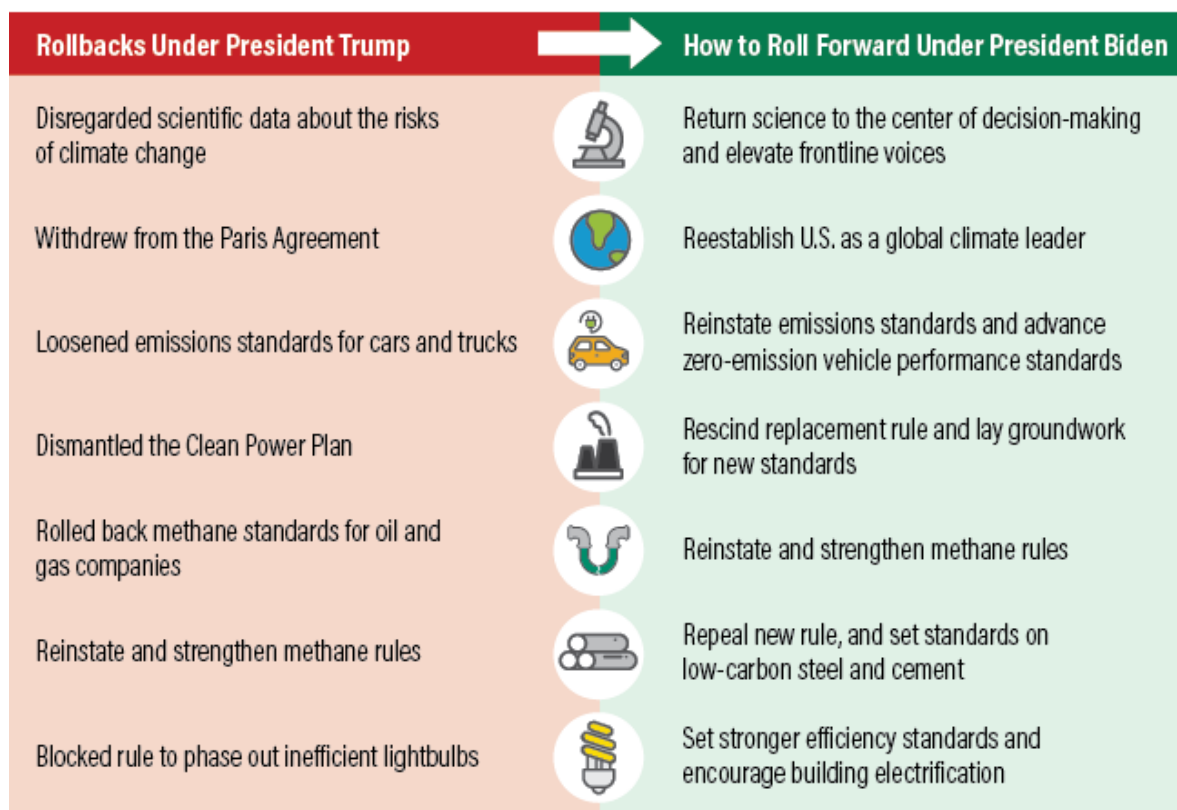

**Use the document and your knowledge to present and explain the actions that should be taken by the Biden administration concerning global warming.**

**Document 1:**

The Biden administration has a huge task before them when it comes to protecting communities from dangerous climate impacts.

The Trump administration demolished environmental safeguards, suppressed climate science and abandoned global cooperation on climate action. Given the immensity and urgency of the decarbonization challenge, it won't be enough to simply reverse rollbacks from the Trump administration and restore previous regulations. Four years of driving in the wrong direction has widened the chasm<sup>2</sup> the United States must cross to meet its Paris Climate Agreement targets and rein in<sup>3</sup> harmful climate pollution. The COVID-19 pandemic led to additional, related damage.

Fortunately, President-elect Biden has assembled a team with ample legal grounding to take early executive actions — not only to roll back Trump administration damages, but to roll forward new rules that address the ever-growing climate crisis.
